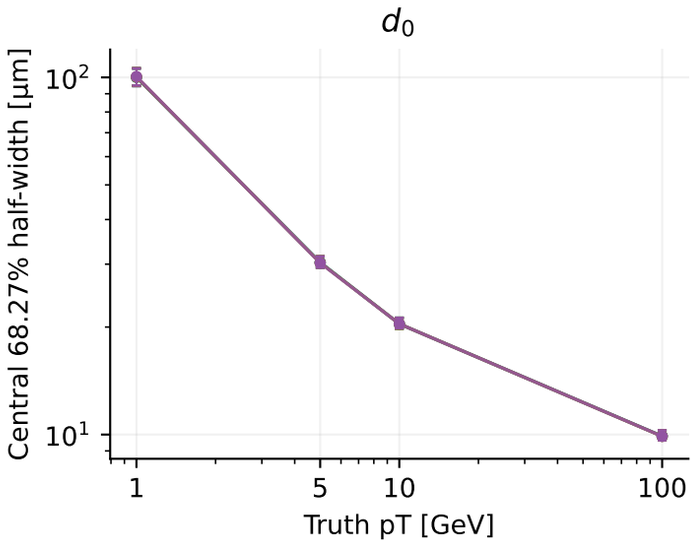
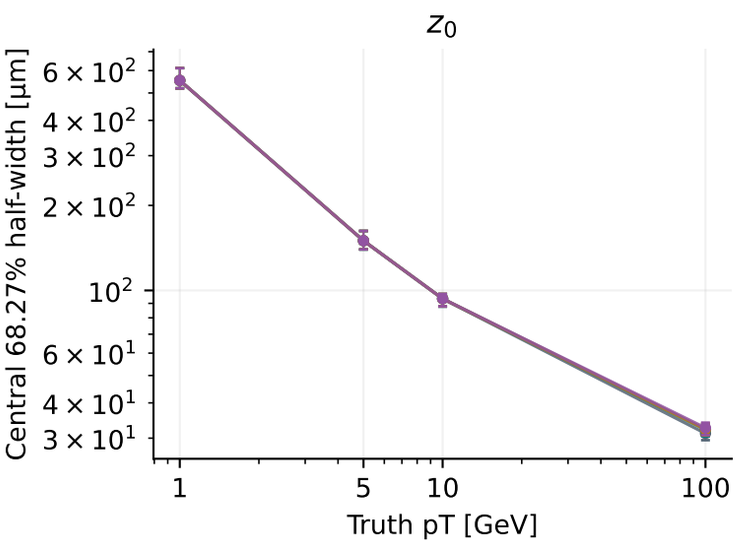
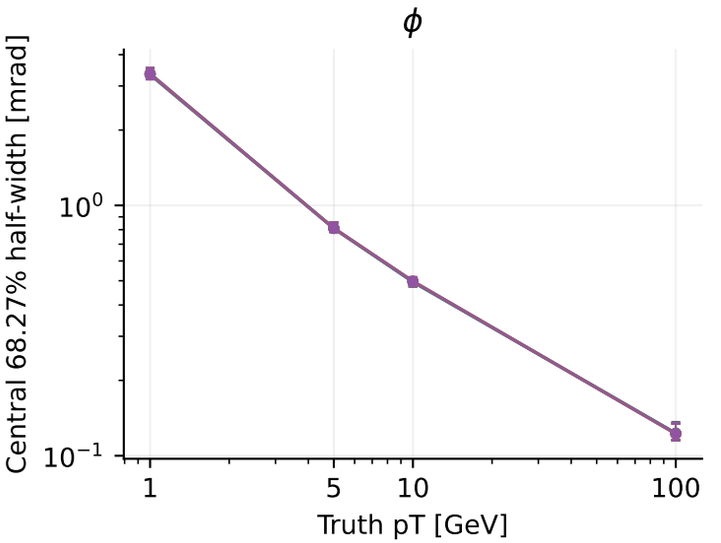
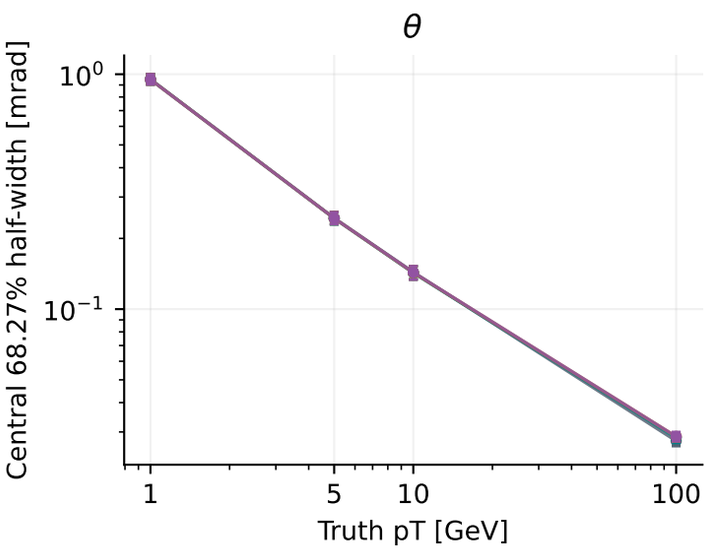
Fatras single muons - uncut residual widths

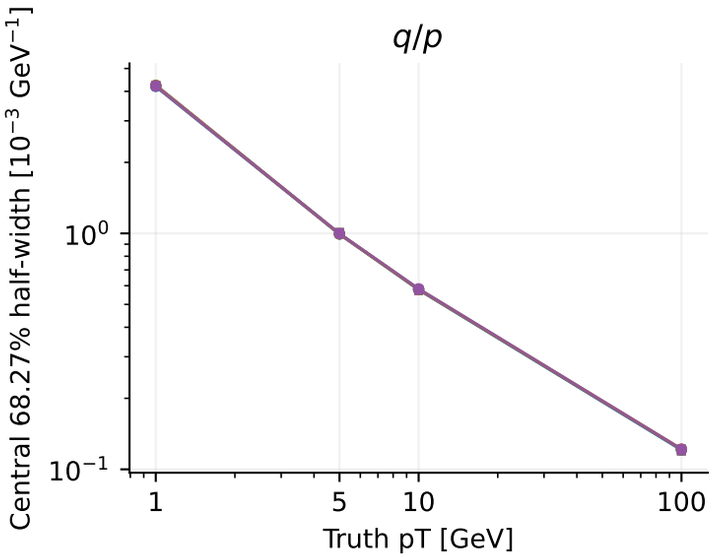
All truth η · finite matched-primary representatives · paired 68.27% bootstrap intervals · ≥30 entries

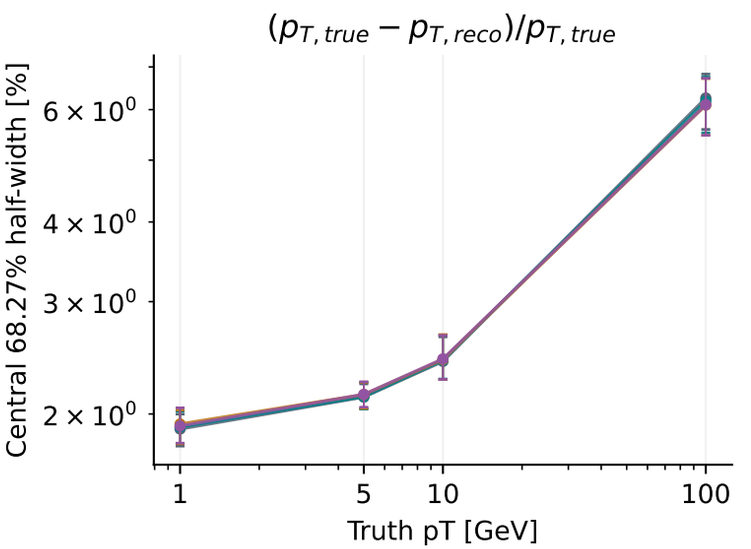












Widths retain wrong-charge tracks and all finite tails; displayed values are conditional on successful primary matching.

Statistical intervals only. Scaled frozen Gaussian longitudinal response is not physical sensor calibration; boundary retries may alter non-target draws.

PROTOTYPE · PR104 balanced tracker · 3 T · pixel GBTS + full-sensor CKF + ambiguity resolution
