Gaussian response control — Resolution ratios to 0.5 mm

100 GeV transverse momentum · 5,000 paired muons per pitch · independent Gaussian errors, σ = pitch/√12 · no merging

Separate response diagnostic; all sensor axes use fixed pitch/√12 except the scanned strixel-v width. Paired bootstrap SE, 400 draws.

PROTOTYPE · PR104 balanced tracker · constant 3 T · native Fatras + truth-associated Kalman fit
