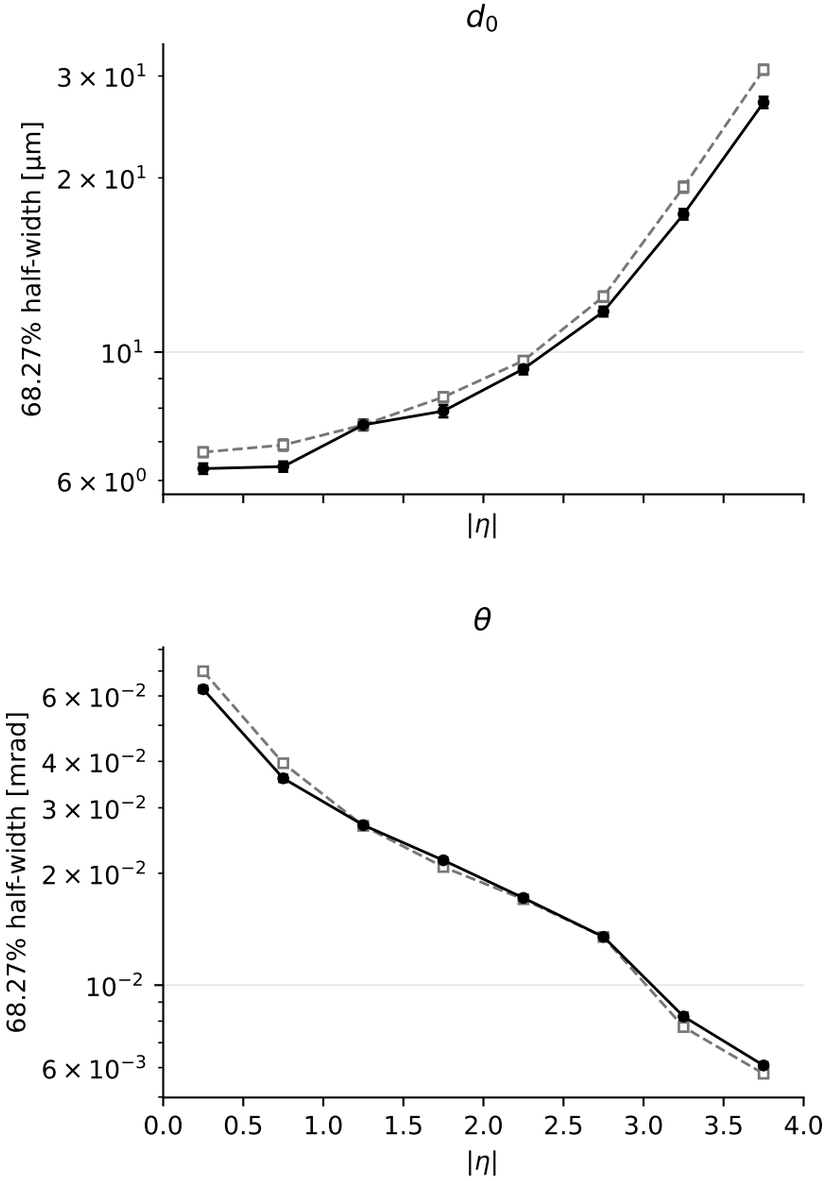
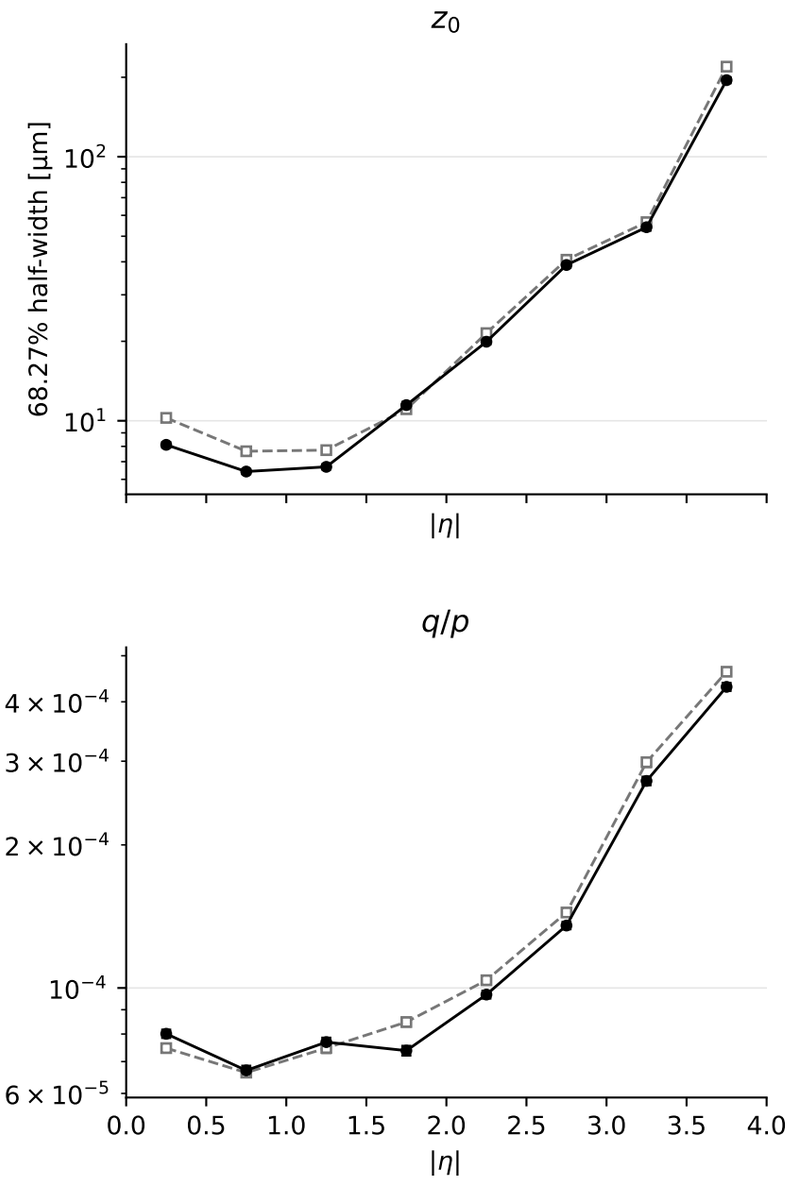
nODD Fatras truth-tracking resolutions

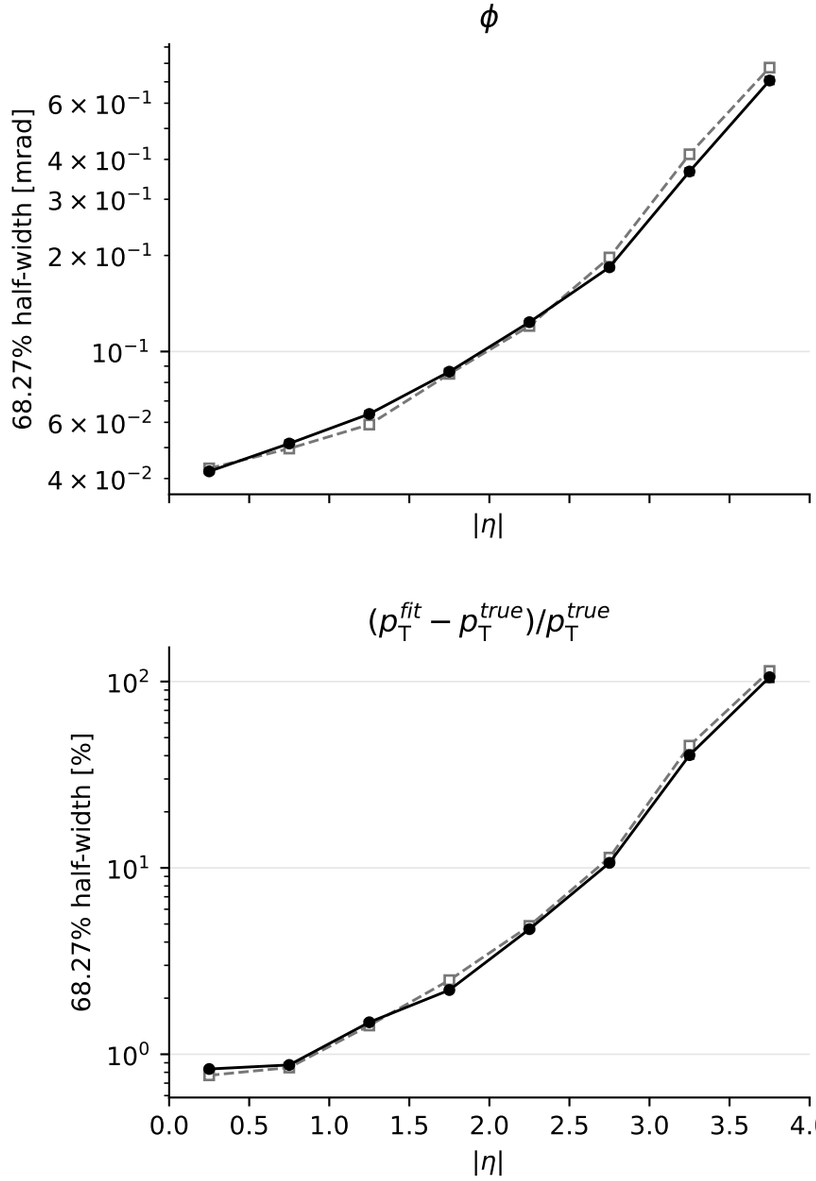
$p_T = 100$ GeV · 20,000 matched generated muons per baseline · 3 T · Δη = 0.5 in |η|

Old baseline · 0.5 mm strixels

New baseline · 2 mm, reduced services







Widths use all finite fits, including tails and wrong-charge fits. Error bars: 400 event-bootstrap sampling SE.

Truth-associated Kalman fits, ≥7 unique measurements. Selection/fitting losses and full SD/RMS are retained separately; time is unmeasured.
